Share prices at close April 11, 2014 See pp. 34-36 for analyst coverage. BMO Research presents a review of the 136 mining companies under coverage, updating for revised commodities and foreign exchange rates that resulted in mostly modest changes. The equity analysis focuses on testing seasonality patterns often observed in the commodities.

- Sell in May and go away is not quite correct. Commodities and mining equities approach seasonal low prices in May/June, with an opportunity to buy in anticipation of a rally to August/September.
- 2. The buy in June and sell in September strategy appears to be compelling and for the XAU was correct in eight of 10 years, generating a cumulative return of 58% (average 5.8%/period).
- 3. Iron ore, steel, diversified miners and diamond stocks continue to rank best for relative valuation. Meanwhile, coal, uranium and PGM stocks appear the least attractive sectors for valuation.

Fig 1: Iron Ore, Steel, Diversified Miners and Diamond Stocks Rank Best

1. Executive Summary

Seasonality Can Be Your Friend

"Sell in May and Go Away" is not completely correct, using the last 20 years as a guide. Analysis of the last five, 10 and 20 years of stock and commodity price performance suggests that a simple strategy of buy in June and a sell in September works much better.

Buying gold equities in June and selling in September made money in four of the past five years, eight in the past 10 years and 12 in the past 20 years (based on the XAU Index). Copper metal and stocks are similar, but other base metals and diversified stocks show much weaker seasonality.

Execution of the strategy with an actual purchase date then sale date is difficult and the analysis only used averages with the benefit of hindsight.

Top Mining Picks

BMO's Top 6 metals and mining picks are weighted towards the value/defensive end of the spectrum, but also include junior growth stocks.

BHP Billiton offers a good dividend yield and undemanding multiples. Franco-Nevada is a high multiple name, but as a royalty company shows good cash flow and low sensitivities. Dominion is both a value and growth story, in diamonds. Imperial is BMO Research's copper growth choice with Red Chris commissioning in H2/14.

At the smaller end of the scale, BMO Research prefers Tahoe in silver and Platinum Group Metals in the PGMs and African Minerals in iron ore.

Commodity Price Update - Nickel & Met Coal Changes

The most significant price revisions by BMO Research include raising nickel and palladium price forecasts over the medium term, and decreasing met coal prices through 2017E. Other slight changes for 2014E include upward revisions to gold, silver and platinum, and downward revisions to copper and iron ore, based on Q1 actuals. A full review of commodities and price outlook has been published concurrently (Commodity Canvas Q2/14).

Top 6 Stocks:

- + BHP Billiton
- + Franco Nevada
- + Dominion Diamonds
- + Imperial Metals
- + Tahoe Resources
- + Platinum Group Metals

April 16, 2014

2. Preferred Stocks

The following list reflects the analysts' views of the best stocks in each particular sub-sector. All of the following are rated Outperform.

Gold Miners

Franco-Nevada: The royalty/streaming structure generally represents a lower-risk alternative to investing in gold producers. The current asset base is forecast to generate revenue growth while the strong balance sheet provides scope for acquiring additional royalties and enhanced dividends.

Primero: The acquisition of Brigus' Black Fox mine has enabled Primero to immediately lower political and operational risk with its new diversified, multimine asset base, which should garner higher trading multiples.

Randgold: Offers appeal for quality assets capable of maintaining profitability at weaker gold prices and delivering low-cost production growth. Poised to begin generating free cash flow having navigated peak project funding. Experienced management team offsets higher jurisdiction risk

Silver Sector

Silver Wheaton: Remains the preferred senior silver stock with low-cost streaming arrangements ensuring free cash flow even at low silver prices.

Tahoe Resources: Newest entrant into producer ranks with exposure to a large high-grade silver deposit, 20Moz annually at all-in-costs ~US\$10/oz. THO is in a strong position to generate free cash flow at spot silver prices.

Diversified Miners

BHP Billiton: Remains the preferred big cap name, balance sheet strong with debt reduction in 2014 on track, lowered costs and capex, net cash flow increasing, 4% dividend yield with moderate growth rates.

Rio Tinto: A well articulated and coherent strategy on lowering costs and capex, net cash flow increasing with cash return possible late 2014 into 2015, 4% dividend yield but some worries on iron ore price H2/14.

Base Metal Companies

KGHM: Underpriced versus larger cap copper peers. Significant copper production of ~575ktpa from its mid-cost but stable operation in Poland with reserve life 35+ years. Future growth to ~770ktpa from international operations, in particular Sierra Gorda in Chile and Victoria in Sudbury.

Lundin Mining: One of the best capitalized copper stocks with a disciplined and low-risk growth strategy. Expect re-rating in Q4/14 following commissioning of the Eagle copper-nickel mine in the bottom cost quartile.

Capstone Mining: Expected rerating throughout 2014 following increased visibility of earnings and balance sheet recharge with cash flow contributions from recently acquired Pinto Valley copper mine.

Imperial Metals: One of the few low-political-risk copper plays with a large shareholder key to mitigating financing risk. Expect re-rating in H2/14 following commissioning of Red Chris.

See pp. 34-36 for analyst coverage.

Seasonality Analysis

April 16, 2014

Coal Miners

Peabody Energy: Low valuation relative to peers and history, strong position in low-cost U.S. basins (PRB and Illinois). Cost improvements in Australia (helped by a weaker AUD) are expected to steady cash flow and assist in deleveraging the balance sheet.

Iron Ore Producers

African Minerals: Higher risk with hoped for higher reward. Shares at very large discount to NPV, Tewoo deal equivalent to £6.50/sh nearly four times share price, production ramping up albeit lagging earlier forecasts.

Explorers/Juniors

Continental Gold: Financed in late 2012 and has over US\$100M in cash. This gives flexibility to wait for an opportune time to procure additional capital. Continuing high-grade drill intercepts maintained.

Torex Gold: Morelos is one of the premier advanced development projects offering exposure to a high-grade resource capable of support production at a meaningful scale. The project is fully permitted, construction commenced and financing is being finalized.

Steel Companies

U.S. Steel: U.S. Steel benefits from cost savings from lower input costs (particularly for met coal) and also Project Carnegie. In addition to its large U.S. flat-rolled business, X has leverage to improving European economic conditions and continued strong demand for U.S. tubular products.

PGM Miners

Platinum Group Metals: Fully funded through to positive free cash flow from its shallow, higher-grade conventional WBJV operation with first production forecast for mid-2015. Waterberg offers the potential for a shallow, low-cost, mechanised mine with first production as soon as 2019.

Uranium Producers

Cameco: Best placed of the uranium stocks to capitalise on the mid-to longer-term outlook of the uranium market entering a deep and sustained deficit by 2018. Cash flow has limited downside to uranium prices <US\$40/lb. Whilst Cameco remains the most attractive uranium name, it does appear fully priced at current levels; investors should look for entry points on any pullback in Cameco's share price.

Diamond Companies

Dominion: Poised for significant production and revenue growth over the next several years, driven by grade increases at its Ekati operation. Dominion working on a material life of mine expansion opportunity that could be largely self-funded and which could add 10 to 20 years to its production profile.

See pp. 34-36 for analyst coverage.

April 16, 2014

3. Sector Equity Valuations

BMO Research has ranked and analysed the 136 stocks under coverage to determine the most attractive sectors based on key valuation metrics.

The analysis continues the pattern established in the BMO Research report titled *Where Is the Value?* (published October 17, 2013) and updated with "Cash Flow Key With Lacklustre Commodities" (January 13, 2014)

The analysis identifies steel, iron ore, diversified and diamond stocks as the most attractive for relative value, while PGM, coal and uranium stocks appear to be the least attractive.

Comparing broad sector averages may fail to account for a number of company-specific risks, but it does allow for systemic disconnects between equity valuations and commodity.

The analysis has been updated for prevailing spot prices and equity valuations, demonstrating only modest changes to the relative preferences.

The results support BMO Research's preference for exposure to iron ore, steel, and copper producers to supplement a core holding of diversified miners.

Fig 5: BMO Research Sector Rank for Valuation Metrics (1=Best)

FCF/MC EV/EBITDA P/NPV₁₀₉ P/EPS Overall Steel Iron Ore Steel Steel Steel 2 Steel Iron Ore Iron Ore **Diamonds** Iron Ore Aluminum 3 Diamonds Diversifieds Iron Ore 5 Copper Copper Copper 6 Gold Silver Coal **Aluminum** Aluminum Silver 7 PGM Gold Silver Gold 8 Uranium **Aluminum** PGM Gold PGM 9 10 10 Aluminum 10 Gold 10 Coal 11 Uranium

Steel, iron ore, diamonds, and diversifieds still appear to offer the best value.

Steel	20.04% (2)	0.60x (1)	7.39x (1)	3.73x (1)	1.25	1
Uranium	-0.30% (8)	3.68x (9)	33.89x (11)	16.15x (11)	9.75	11

Uranium -0.30%

Coal and uranium appear to be the least attractive.

April 16, 2014

Sector Free Cash Flow Forecasts, Using Spot

The BMO Research coverage universe of 136 mining stocks is forecast to generate US\$42B of free cash flow in 2014 and US\$67B in 2015, which represents ~5% of the total market capitalization using prevailing spot commodity prices and currencies.

Fig 7: BMO Research FCF/Market Cap in 2014E and 2015E, Using Spot

Source: BMO Capital Markets

The FCF/Market Cap is forecast at 5% for the group in 2014, using spot prices.

Diversified miners account for 50% of 2014 and 2015 expected FCF.

Of the 11 metals and mining subsectors evaluated, seven are forecast to improve free cash flow over the next two years.

Diamonds (-US\$0.3B), aluminum (-US\$0.1B), coal (-US\$0.1B) and uranium (-US\$0.1B) are forecast to generate less free cash in 2015E than in 2014E, using spot commodity prices and currencies. The 2014 free cash flow for diamonds is skewed by a number of concurrent growth projects.

Copper companies are expected to shift from consuming cash to generating modest amounts of cash over the same time frame.

BMO Research continues to expect the steel and iron ore sectors to generate meaningful free cash flow.

The copper sector is forecast to shift from consuming ~US\$4.9B of cash in 2014E to generating US\$0.9B in 2015E, using spot prices, for a turnaround of some US\$5.8B.

The gold sector is forecast to be breakeven 2014 and generate US\$2.5B in 2015E at spot prices, which demonstrates considerable efforts by gold companies to reduce costs, improve profitability and adapt to lower gold prices.

The 11 senior producers are forecast to generate ~US\$0.3B in 2014E and ~US\$3.6B in 2015E of positive free cash flow at current prices.

Iron ore and steel companies expected to generate significant free cash flow in 2015E.

The gold sector appears to be adapting to lower gold prices and is expected to be FCF neutral.

April 16, 2014

Free Cash Flow to Market Capitalization

BMO Research expects 42% of the 136 stocks in its mining coverage universe to generate free cash flow in 2014E. In 2015E, the percentage is expected to increase to 56% of the entire stock coverage.

BMO Research recommendations tend to reflect a preference for strong free cash flow generation at spot commodity prices.

Iron ore and steel, then aluminum and diversified miners have the strongest FCF for 2014-2015E; coal, diamonds and copper have the weakest using spot.

Fig 8: BMO Research Sector Free Cash Flow to Market Capitalization, 2014-2015E Average at Spot Prices

	FCF/MC	Rank
Aluminum	5.99%	3
Coal	-7.11%	11
Copper	-1.84%	9
Diamonds	-4.17%	10
Diversifieds	5.97%	4
Gold	0.94%	6
Iron Ore	64.01%	1
PGM	0.34%	7
Silver	1.06%	5
Steel	20.04%	2
Uranium	-0.30%	8

Source: BMO Capital Markets

Price to Net Present Value

BMO Research mining stocks demonstrate a wide range of price to net present value multiples when calculated using a 10% discount rate and spot commodity prices. A number of companies trade at high multiples due to high debt or low project value while others trade at lower multiples reflecting political or execution risk.

Steel, iron ore, diamonds and copper stocks miners have the most attractive valuations using spot prices.

Fig 9: BMO Research Sector Price to Net Present Value, 10% Discount Rate at Spot Prices

	P/NPV _{10%}	Rank
Aluminum	18.10x	10
Coal	na	11

Gold	2.39x	7
Iron Ore	0.79x	2
PGM	2.72x	8
Silver	2.19x	6
Steel	0.60x	1
Uranium	3.68x	9

April 16, 2014

Price to Earnings

BMO Research estimates for 2014E price to earnings at spot prices display a wide range of results. In general, most of the diversified, copper, iron ore, and steel producers tend to cluster around 10-15x EPS, while precious metal producers average around 25-35x EPS.

At spot prices, many coal, uranium, and aluminum producers would not be expected to report meaningful earnings.

Fig 10: BMO Research Sector Price to Earnings per Share, 2014E at Spot Prices

Source: BMO Capital Markets

Enterprise Value to EBITDA

Enterprise Value to EBITDA results appear much more consistent than EPS measures with the distribution of company multiples clustered closer to sector averages.

Diversifieds, iron ore, steel, diamond and larger copper companies tend to trade around 5x 2014E EBITDA at spot prices.

Copper developers, senior gold producers, and silver companies are generally observed at 5-10x EBITDA with relatively few exceptions.

Uranium, coal, and PGM stocks appear the most expensive.

Fig 11: BMO Research Sector Enterprise Value to EBITDA, 2014E at Spot Prices

	EV/EBITDA	Rank
Aluminum	8.85x	7
Coal	14.71x	10
Copper	8.81x	6
Diamonds	4.70x	2
Diversifieds	6.89x	4
Gold	8.76x	5
Iron Ore	4.72x	3
PGM	12.53x	9
Silver	11.77x	8
Steel	3.73x	1
Uranium	16.15x	11

April 16, 2014

4. Gold & Silver Stock Seasonality

Gold and silver metal prices appear to display a degree of seasonality during the calendar year, based on longer-term average monthly data (see "Commodity Canvas Q2/14" for more details on commodity seasonality).

Both gold and silver metal prices tend to start each year stronger than the previous year and often rally through to February, then weaken into April and further in May. Gold and silver metal prices often recover during July-August before drifting lower for the year-end.

Silver generally displays a more pronounced trend than gold in the average monthly metal prices changes.

Fig 12: Gold & Silver Metal Price Monthly Average Changes

The gold and silver metal prices appear to display a degree of seasonality during the year, based on longer-term average monthly data.

Silver generally displays greater volatility than gold in the average monthly metal prices changes.

Source: BMO Capital Markets

Fig 13: Gold Metal vs. Philadelphia Gold & Silver Index – Monthly Changes

The gold and silver equities on average appear to lead the metal prices down in April-May and often lag the metal price recovery in July-August-September.

April 16, 2014

Distribution of Maximum and Minimum Metal Prices

Analysis of the daily price relative to the annual maximum and minimum prices for gold and silver metal suggests that July is typically the weakest month using five-year, 10-year and 20-year averages.

The average trading pattern also displays the strong start to the year with a January-February rally, followed by a weaker second quarter in advance of a third-quarter metal price recovery.

The upward metal price move during the second-half of the year reflects the 12-year successive metal price increase for gold and silver to 2012.

The results of 2013 differ from previous years with the precipitous metal price fall in April, but the July to September price recovery is consistent with previous years of trading patterns.

Fig 14: Gold Price Performance – Percentage of Max and Min on Daily Data

Analysis of the distribution of average maximum and minimum prices for gold and silver metal suggests that July is typically the weakest month using five-year, 10-year and 20-year averages.

Source: BMO Capital Markets

Fig 15: Silver Price Performance - Percentage of Max and Min on Daily Data

The average trading pattern also displays the strong start to the year with a January-February rally, followed by a weaker second quarter in advance of a third-quarter metal price recovery.

April 16, 2014

Buy in May/June for September Recovery?

The gold and silver equities on average appear to lead the metal prices down in April/May and often lag the metal price recovery in July-August-September.

The metal price action in 2013 created an abnormal monthly equity performance, but the general gold/silver equity price pattern of April-May weakness followed by July-August-September recovery was apparent.

Buying a basket of gold equities in May and selling in September made money in four of the past five years and seven of the past 10 years, but a proportionally lesser 11 of the past 20 years (based on the XAU Index).

Buying gold equities in June and selling in September made money in four of the past five years, eight of the past 10 years and 12 of the past 20 years (based on the XAU Index).

Execution of the strategy with an actual purchase date then sale date is difficult and the analysis only used averages with the benefit of hindsight.

Fig 16: Philadelphia Gold & Silver Index Performance

The gold and silver equities on average appear to lead the metal prices down in April/May and often lag the metal price recovery in July-August-September.

The metal price action in 2013 created an abnormal monthly equity performance, but ...

...the general pattern of April-May weakness followed by July-August-September recovery was apparent.

Buying gold equities in May or June and selling in September often provides winning results.

XAU S	Seasonal St	rategy						
Wins May-Sep Jun-Sep								
5-Year	4	4						
10-Year	7	8						
20-Year	11	12						

Execution of the strategy with an actual purchase date then sale date is difficult and the analysis only used averages with the benefit of hindsight.

Fig 17: Gold ETF Index Performance

April 16, 2014

Distribution of Maximum and Minimum Equity Prices

Analysis of the distribution of average maximum and minimum prices for the Philadelphia Gold & Silver Index (XAU) suggests that June and July are typically the weakest months using five-year, 10-year and 20-year averages.

The analysis also appears to support the ability to buy in May or June, then sell in September to provide winning results on average.

Fig 18: XAU Index Performance - Percentage of Max and Min on Daily Data

June and July are typically the weakest months for the XAU Index, using average five-year, 10-year and 20year data.

The results of 2013 differ from previous years with the lack of continued price recovery beyond September that was evident in previous ears of trading.

Source: BMO Capital Markets

Senior Gold Stocks Also Appear to Display Seasonality

The average monthly prices for key North American senior gold stocks (Barrick, Goldcorp (restricted), Kinross and Newmont) also appear to lead the metal prices down in April/May and often lag the metal price recovery in July-August-September.

Fig 19: Gold & Gold Stock Monthly Average Changes

Source: BMO Capital Markets

The average monthly prices for key North American senior gold stocks also appear to lead the metal prices down in April and often lag the metal price recovery in July-August-September.

April 16, 2014

Buy in June and Sell in September?

The simple buy in June and sell in September strategy appears to work for most years over the past 20 years for the gold and silver metal and the gold/silver equities represented in the Philadelphia Gold & Silver Index (XAU).

Buy in June and sell in September appears slightly more successful than the buy in May and sell in September strategy.

The observation also appears to hold for key North American senior gold stocks (Barrick, Goldcorp (restricted), Kinross and Newmont) that are included in the Philadelphia Gold & Silver Index.

Fig 20: Percentage of Winning Years with Seasonal Buy and Sell

The simple buy in June and sell in September strategy appears to work for most years over the past 20 for the gold and silver metal and the gold/silver equities represented in the XAU.

Source: BMO Capital Markets

Fig 21: Percentage of Winning Years with Buy in June and Sell in September

The observation also appears to hold for key North American senior gold stocks (Barrick, Goldcorp (restricted), Kinross and Newmont).

See pp. 34-36 for analyst coverage.

April 16, 2014

Average Gains Exceed Losses in Seasonal Buy/Sell

A simple analysis of the average monthly price moves captured in the buy in June and sell in September strategy suggests that the theoretical gains exceed the losses for the five-year, 10-year and 20-year historical periods for the gold and silver metal and the Philadelphia Gold & Silver Index.

The gains (or losses) are calculated as the percentage movements in the average monthly price, assuming a buy in June and sell in September strategy for the five-year, 10-year and 20-year historical periods.

The analysis also holds for the key North American senior gold stocks Barrick, Goldcorp (restricted), Kinross and Newmont, while the gold miner ETFs (GDX and GDXJ) display strong returns using the strategy since inception.

Execution of the strategy with an actual purchase date then sale date is difficult and the analysis only used averages with the benefit of hindsight.

Fig 22: Gold & Silver Returns Based on Buy in June and Sell in September

A simple analysis of the average monthly price moves captured in the buy in Jun and sell in Sep suggests healthy theoretical gains.

5. Base Metal Seasonality

The base metal (copper, aluminum, nickel, zinc and lead) prices appear to display a degree of seasonality during the calendar year, based on longer-term average monthly data (see "Commodity Canvas Q2/14" for more details on commodity seasonality).

Base metal prices tend to start each year stronger than the previous year and often weaken into April/May prior to a typical recovery during July-August before drifting lower for the year-end.

Fig 24: Base Metal Five-Year Monthly Average Price Changes

5-Year Price Performance (month/month) 100 May Aug Sep Jan Feb Mar Apr Jun Jul Oct Nov Dec Copper Aluminum Nickel Zinc Lead

The base metal prices appear to display a degree of seasonality during the year, based on longer-term average monthly data.

Source: BMO Capital Markets

Fig 25: Base Metal 10-Year Monthly Average Price Changes

Demand patterns that appear to drive the metal price seasonality are discussed in "Commodity Canvas Q2/14."

April 16, 2014

Seasonal Buy/Sell Appears Possible, Especially Copper

The simple buy in June and sell in September strategy appears to work for most years over the past 20 years for each base metal except for nickel.

Copper appears to offer the best potential for the seasonal trade of the base metals tested for the five-year, 10-year and 20-year periods.

A simple analysis of the average monthly price moves captured in the buy in June and sell in September suggests that the theoretical gains exceed the possible losses for the five-year, 10-year and 20-year historical periods for each of the base metals.

Fig 26: Percentage of Winning Years With Buy in June and Sell in September

The simple buy in June and sell in September strategy appears to work for most years over the past 20 years for each base metal except for nickel.

April 16, 2014

Seasonal Buy/Sell Appears to Work for Copper Stocks

The seasonal buy/sell strategy has been tested with selected copper stocks, specifically Antofagasta, Freeport and First Quantum. The simple buy in June and sell in September strategy appears to work for most years over the past 20 years (although just 18 years for Freeport).

The theoretical gains appear to exceed the possible losses for the five-year, 10-year and 20-year historical periods for each of the base metal stocks in excess of the equivalent gains in the underlying copper price.

Fig 28: Percentage of Winning Years With Buy in June and Sell in September

The simple buy in June and sell in September strategy appears to work for most years over the past 20 years for the senior copper stocks.

April 16, 2014

Seasonal Buy/Sell Struggles With Alcoa & Diversified

The seasonal buy/sell strategy has been tested with selected diversified miners, specifically Alcoa, BHP Billiton and Rio Tinto with mixed results that may reflect the relatively weaker seasonality of the underlying commodity exposure for the companies.

The theoretical gains appear to exceed the possible losses for BHP and RIO, but were unsuccessful for Alcoa.

Fig 30: Percentage of Winning Years With Buy in June and Sell in September

The simple buy in June and sell in September strategy yielded mixed results for Alcoa, BHP and Rio Tinto that may reflect the weaker seasonality of the underlying commodities.

Analyst's Certification

Each analyst whose name appears on the front page of this report hereby certifies that the views expressed in this report accurately reflect the analyst's personal views about the subject securities or issuers. Each analyst also certifies that no part of his compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Analysts who prepared this report are compensated based upon (among other factors) the overall profitability of BMO Capital Markets and their affiliates, which includes the overall profitability of investment banking services. Compensation for research is based on effectiveness in generating new ideas and in communication of ideas to clients, performance of recommendations, accuracy of earnings estimates, and service to clients.

Analysts employed by BMO Nesbitt Burns Inc. and/or BMO Capital Markets Ltd. are not registered as research analysts with FINRA. These analysts may not be associated persons of BMO Capital Markets Corp. and therefore may not be subject to the NASD Rule 2711 and NYSE Rule 472 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Sector Risk Disclosure

In addition to the risks involved in investing in common stocks generally, we also highlight the following risks that pertain to the mining sector.

Feasibility Study: Mine plans, mining schedules and production are based on reserve and resource estimates. These plans involve inherent uncertainties. Resource estimates contain statistical computations and judgments by geologists. Reserve estimations and mine plans contain technical and commercial judgments by engineers that are optimized on the basis of estimates for mining costs, ore haulage costs, processing costs and recoveries, as well as gold price assumptions. Expected metal recoveries are based on test work carried out on representative samples of the ore and treatment processes at the laboratory, sometimes involving bench tests or pilot plant scales. It is not possible economically to obtain absolute certainty as to the representative nature of the sample or the laboratory results when applied to the full-scale operations. Mining and processing costs estimates are historically based and may change as a result of changed physical conditions, market conditions and transportation costs, or changed economic conditions in general.

Technical: Mining and processing may be affected by unexpected events, such as pit failures, dike failures or equipment breakdowns, which may result in significantly higher costs, revisions to mine plans, sterilization of reserves or ultimate closure of the mine.

Operating: Mining operations can be affected by a number of risk factors, including: unexpected geological conditions; unusual mining conditions, unexpected processing problems, unexpected metallurgical problems, shortages in skilled workforce; environmental issues and a lack of availability of support infrastructure.

Permits and Approvals: Operations and development activities are contingent on the receipt and maintenance of various permits and approvals from appropriate governmental authorities. There is no guarantee that any company will be successful in obtaining the necessary permits or acceptances for its planned development, or that it will be successful in obtaining renewals of existing permits and approvals on a timely basis or at all.

Litigation / Political risk: Mining operations are exposed to various levels of political risks and uncertainties. Changes, if any, in mining or investment policies or shifts in the political landscape may adversely affect any mining company's operations or profitability. Operations may be affected in varying degrees by government regulations or unanticipated changes to regulations with respect to, but not limited to, restrictions on production, income taxes, royalties, maintenance of claims, environmental legislation, land use, land claims of local people, water use and mine safety. Failure to comply with applicable laws and regulations could result in financial losses, litigation, revocation of permits or other negative consequences. The occurrence of these or other various factors and uncertainties cannot be accurately predicted and could have an adverse effect on any mining company's operations or profitability.

Metal Prices: Any reduction in the price of copper, gold, or silver could adversely affect any mining company's share price performance. There are no guarantees that future metals prices will be sustained at levels that enable any mining company to operate its planned operations at a profit. The company's cash flows are exposed, among other things, to fluctuations in the gold and silver prices.

Financing: Any mining company could require additional funding for future operations. Funding of operations or projects could take the form of debt and/or equity financing. There are no guarantees that debt or equity for the project will be available, arranged, or offered on terms acceptable to any mining company.

Additional Matters

To Canadian Residents: BMO Nesbitt Burns Inc. furnishes this report to Canadian residents and accepts responsibility for the contents herein subject to the terms set out above. Any Canadian person wishing to effect transactions in any of the securities included in this report should do so through BMO Nesbitt Burns Inc.

The following applies if this research was prepared in whole or in part by Andrew Breichmanas, Iain Reid, Tony Robson, David Round, Edward Sterck or Brendan Warn: This research is not prepared subject to Canadian disclosure requirements. This research is prepared by BMO Capital Markets Limited and subject to the regulations of the Financial Conduct Authority (FCA) in the United Kingdom. FCA regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 5% or more of the equity of the issuer. Canadian regulations require that a firm providing research disclose its ownership interest in the issuer that is the subject of the research if it and its affiliates own 1% or more of the equity of the issuer that is the subject of the research. Therefore BMO Capital Markets Limited will only disclose its and its' affiliates ownership interest in the subject issuer if such ownership exceeds 5% of the equity of the issuer.

To U.S. Residents: BMO Capital Markets Corp. furnishes this report to U.S. residents and accepts responsibility for the contents herein, except to the extent that it refers to securities of Bank of Montreal. Any U.S. person wishing to effect transactions in any security discussed herein should do so through BMO Capital Markets Corp.

To U.K. Residents: In the UK this document is published by BMO Capital Markets Limited which is authorised and regulated by the Financial Conduct Authority. The contents hereof are intended solely for the use of, and may only be issued or passed on to, (I) persons who have professional experience in matters relating to investments falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order") or (II) high net worth entities falling within Article 49(2)(a) to (d) of the Order (all such persons together referred to as "relevant persons"). The contents hereof are not intended for the use of and may not be issued or passed on

Unauthorized reproduction, distribution, transmission or publication without the prior written consent of BMO Capital Markets is strictly prohibited.
