I. Engaging with Digital Assets and Blockchain Globally

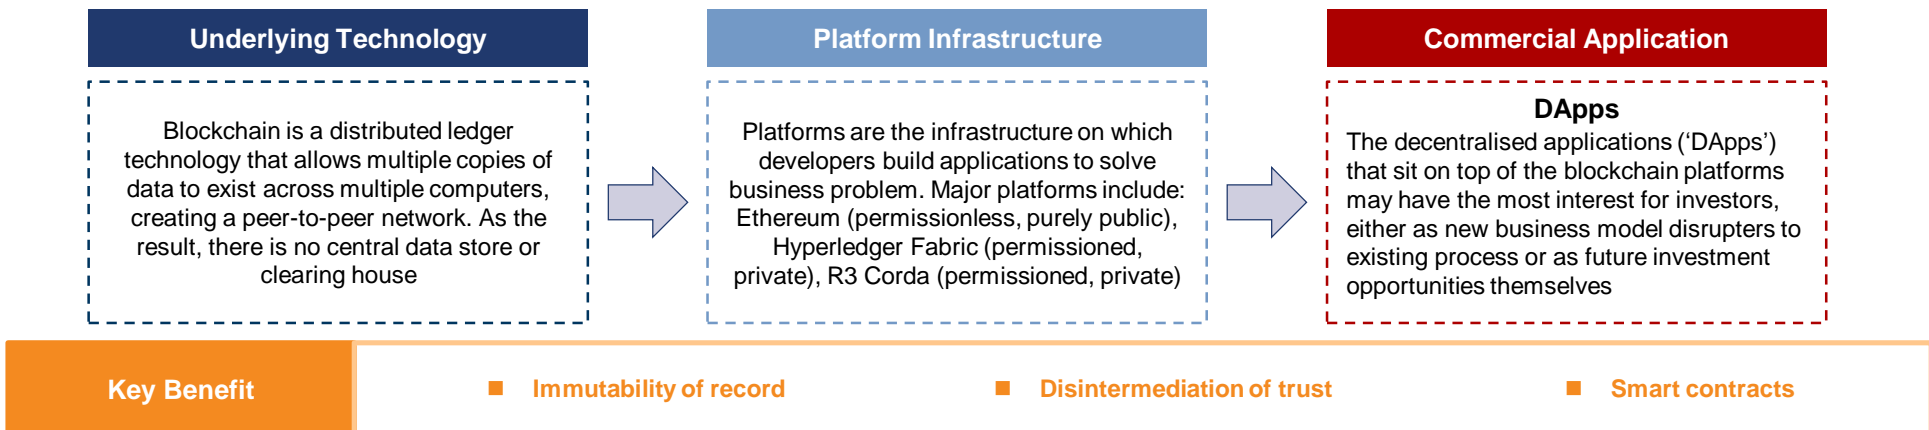

The Evolution of Digital Assets and Blockchain

From Digital Assets to Broader Applications

Digital Assets and Blockchain Rapidly Evolved From Its Infancy, And Has Since Developed into Broader Applications

Application Roadmap – From Technology to Commercialization

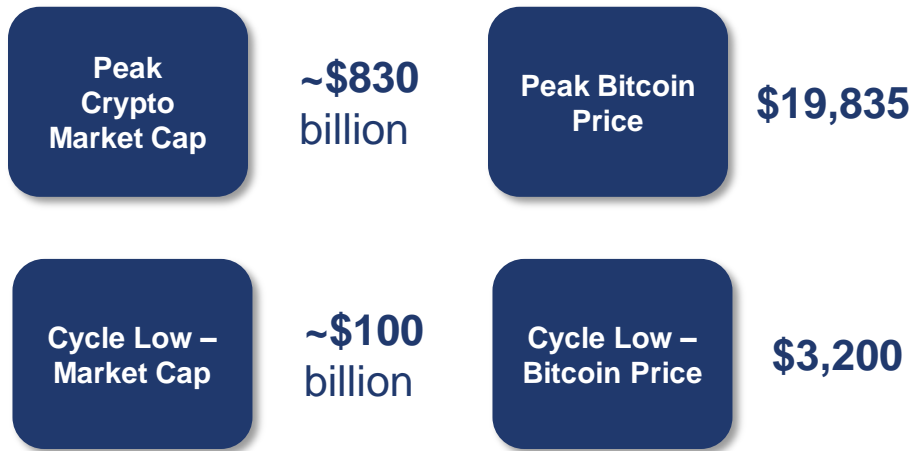

Potential Evolution of the Digital Assets Economy

While many blockchain applications are still digitally native, there are increasing opportunities for more comprehensive usage across the digital assets economy

Digital Assets	Digitally Native Bitcoin, Ether, BAT	Stablecoins Dai, Private (USDC, Novi), Central bank digital currencies	NFTs Digital Collectibles, Art, Avatars, Royalty Stream	Securities (Tokenization) Equity, Debt, Real Estate, Derivatives, Funds and Hybrid
	Primitive Services Lending, Borrowing, Insurance, Trading, Derivatives, Synthetic Assets		Embedded Features Loyalty dividends, Tenure-based voting	
	Public Blockchains Bitcoin, Ethereum	Enterprise Blockchains Private Networks	Blockchain Interoperability Combination of public and private chains	
	Settlement and Custody	Global payment settlement network without intermediaries	Delivery vs. Delivery Improvement of collateral mobility	Settlement of securities

Previous Cycle (2016 – 2019)

Current Cycle (2020 – Present)

Largely a Retail Driven Rally

Broader Institutional Participation

Source: CoinGecko, CoinMarketCap, Coinbase public filings, Chainalysis; ¹ East Asia includes China, Japan, Mongolia, and Korea.

What is Different in this Cycle?

Adoption of New Applications Across the Digital Asset Landscape

Previous Cycle (2016 – 2019)

- Emergence of bitcoin as an alternative asset class for retail investors
 - Low volume and high volatility
 - Lack of institutional grade infrastructure e.g. custody, trade execution and credit
- Hunt for the “next bitcoin”
 - Bitcoin hit its all-time high of nearly \$20,000 and Ethereum at nearly \$1400 primarily because of the ICO craze
 - Total capital raised through ICOs in 2017-2018 was in excess of \$15bn
 - Loss of confidence in ICOs as well as news of scam after scam hitting the market led to a massive drop in interest in the funding model

\$500M+ ICO
No relevant
product

\$1.2B+ ICO
SEC Charges

\$4.2B+ ICO
Purchased
Bitcoin

Current Cycle (2020 – Present)

- 1 **Bitcoin** widely recognized as an asset class across both retail and institutional investors
- 2 **Ethereum upgraded** by improving its efficiency and ability to scale and can better facilitate DeFi
- 3 **Record trading volume** for exchanges driven by a broader crypto rally
- 4 Rise of **stablecoins** for payments and financial applications
- 5 “**Hunt for yield**” driving growth of Centralized Finance (“CeFi”) and Decentralized Finance (“DeFi”)
- 6 Fast growing **Non-fungible tokens** (“NFT”) landscape

What's Driving Investor Interest?

Macro Shifts and Emergence of Bitcoin as an Asset Class

Use Cases

- Evolving narrative as a digital store of value driven by scarcity, security and brand value (network effects)
 - Especially useful in countries with unstable currencies
- Increasing acceptance as collateral for financial transactions
- Unlikely to be used for commerce and payments
 - Volatility and deflationary design makes it less suitable as a medium of exchange
 - IRS treats exchange of bitcoin as transfer of property and a taxable event

Current Scale

3 Yr CAGR

Exchange Tokens Case Study

BNB Powers the Binance Ecosystem

BNB Overview

- BNB was created as part of the Binance exchange through its initial coin offering (ICO) which raised ~\$15m USD in July 2017
- BNB was originally designed to be used to pay discounted fees on the Binance platform and also function as the native token powering the Binance Chain
- When paying in BNB users receive the following discounts on Binance:
 - 25% discount on Spot trading fees
 - 25% discount on Margin trading fees
 - 10% discount on Futures trading fees
- BNB is now an accepted across a growing ecosystem:
 - **Payment:** Pundi X, Monetha, HTC, Coinpayments, CoinGate, Coinify, NOWPayments
 - **Travel:** TravelbyBits, Trip.io, Travalala.com
 - **Entertainment:** Decentraland, Loom Network, VIBE, MachiX, Aeron, Axie Infinity, Steemmonster, ADAMANT Messenger
 - **Service:** DENT, BitTorrent, Storm, Canya, MyWish, PureVPN, CenterServ
 - **Finance:** ETHLend, Moeda, LNDR, Nexo, NAGA, Bitcoin Suisse

Source: Company Website, CoinGecko

¹ Per CoinGecko as of 15-Nov-2021.

Select Statistics

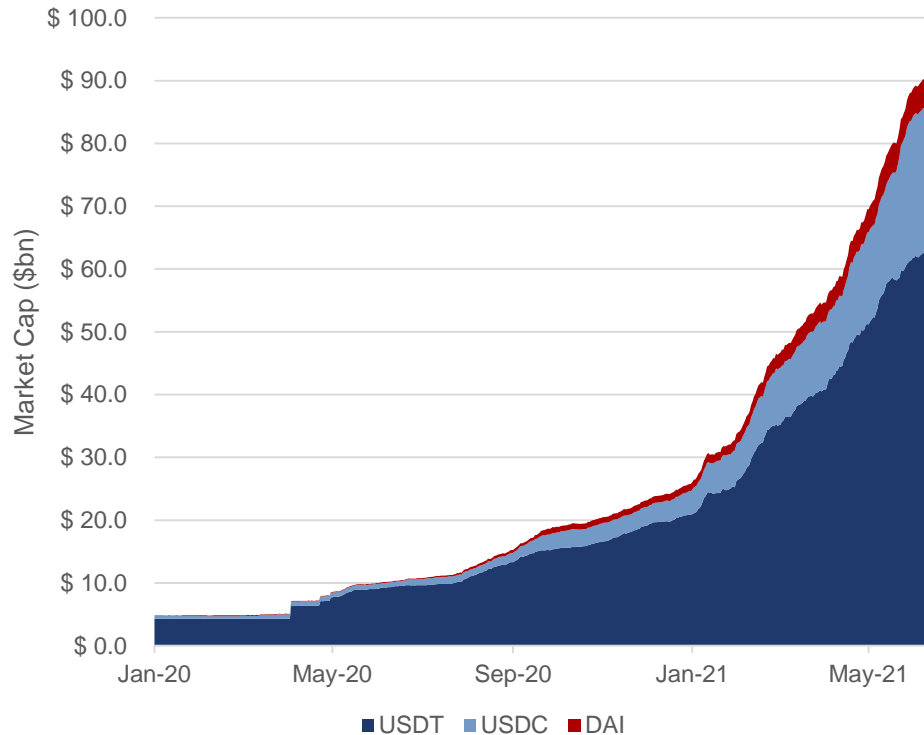

Quarterly BNB Burn

- Binance schedules quarterly burns of BNB to permanently reduce the supply of BNB until a total of 100mm BNB has been destroyed, which represents 50% of the total BNB supply

Rise of Stablecoins for Payments and Financial Applications

Stablecoins Over Time

Market Cap (\$ in billions)	1/1/2020	11/15/2021	% Change
Tether (USDT)	\$4.30	\$73.80	1,616%
USD Coin (USDC)	0.5	34.4	6,780%
Dai (DAI)	0.0	6.4	N/A
Total	\$4.80	\$114.60	2,288%

Source: CoinGecko, Cointelegraph

Growth in stablecoins driven by:

- **Payments** (OTC desks who convert large fiat-based buy orders to stablecoins in order to better route orders around exchanges)
- **Yield** (multiple retail products offering 6-12% yield on USD deposits)

Recent Central Bank Digital Currency News

Accenture and Digital Dollar Foundation to trial United States CBDC this year (May-21)

Rolling up the sleeves: China's tech giants drive digital yuan adoption (May-21)

"Jerome Powell remains resolute in the position that the U.S. will not enter into a CBDC race with China. According to Powell, the Fed is more concerned with getting it right than rushing to play catch up with China."

England's central bank moves ahead with CBDC with 7 job postings (May-21)

Animoca Brands: A Leader in NFTs & Gaming

Disrupting the ~\$150 billion gaming business

What is Animoca Brands?

- Animoca Brands leverages **gamification**, **blockchain**, and **artificial intelligence** to develop and publish **digital entertainment products** including original games as well as products based on popular intellectual properties
- Delivering property rights to the growing **2.5 billion** gamers while creating a **new asset class**
- Leader in the emerging digital assets market with a mission to drive **mass blockchain adoption**
- Partnerships with the biggest brands in the world, with **10 million monthly active users**

The Global Gaming Market

Number of Active Gamers Worldwide from 2014-2021

The video gaming industry is huge and shows no signs of slowing down. While there were about 2.5 billion video gamers across the world in 2019, this figure is expected to further rise to more than 2.7 billion gamers in 2021.

Asia Pacific

1.2Bn Gamers	\$72.2Bn Revenue	X2 Market Size of North America
--------------	------------------	---------------------------------

Asia Pacific represents more than double the revenue generated in the second largest region, North America

The World

2.5Bn Gamers	66% of Population	46% Female
--------------	-------------------	------------

~2.5 billion video gamers around the world in 2019

66% of the U.S. population are gamers, up from 58% just 5 years earlier

Female gamers made up 46% of the U.S. gaming population in 2019, up from 38% in 2007

United States

Animoca Brands: Key Facts

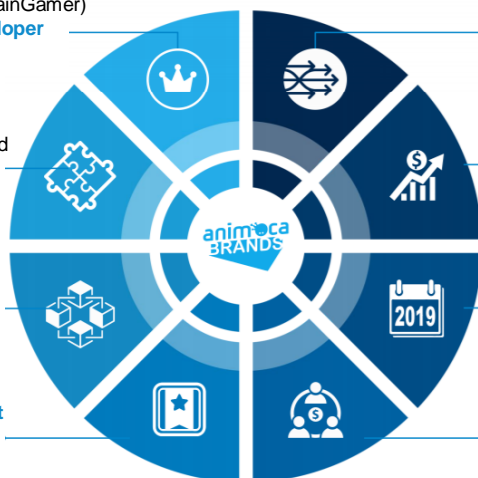

A **Top 5 Blockchain Game Company 2020** (BlockchainGamer) and **Top 50 Global Developer** (PocketGamer)

Multiple game business lines:

development of original games, branded games, and games for third parties; publishing and distribution services

Leader in **adoption of blockchain and AI** for digital assets and games

Partnered with some of **the most respected brands** and **game developers** in the world

Excellent track record in **global deals** and a **world-class technical team** of designers and engineers

Pipeline of **high-value opportunities**

In **2019** the Company recorded cash receipts from customers of ~A\$25 million

Investors include some of **Asia's best-known technology investors**

Synergies: Blockchain and Gaming

- Gamers understand the value of virtual items and currencies**
 - Virtual currencies have been used in video games for decades
 - Gamers are well habituated to virtual / fiat currencies (e.g. "Gold farming" in *World of Warcraft* was a black market employing thousands)
- Blockchain has significant benefits for gamers**
 - Reduces transaction costs thanks to use of cryptocurrency
 - Allows gamers to own their personalized/unique in-game items
 - Provides gamers the opportunity to earn money by trading virtual items in the gaming economy
- Additional blockchain revenue opportunities**
 - (Pre) Sales of in-game assets (e.g. items, utility tokens)
 - Percentage of transaction fees based on volume of digital items traded
 - True economies being built on virtual grounds

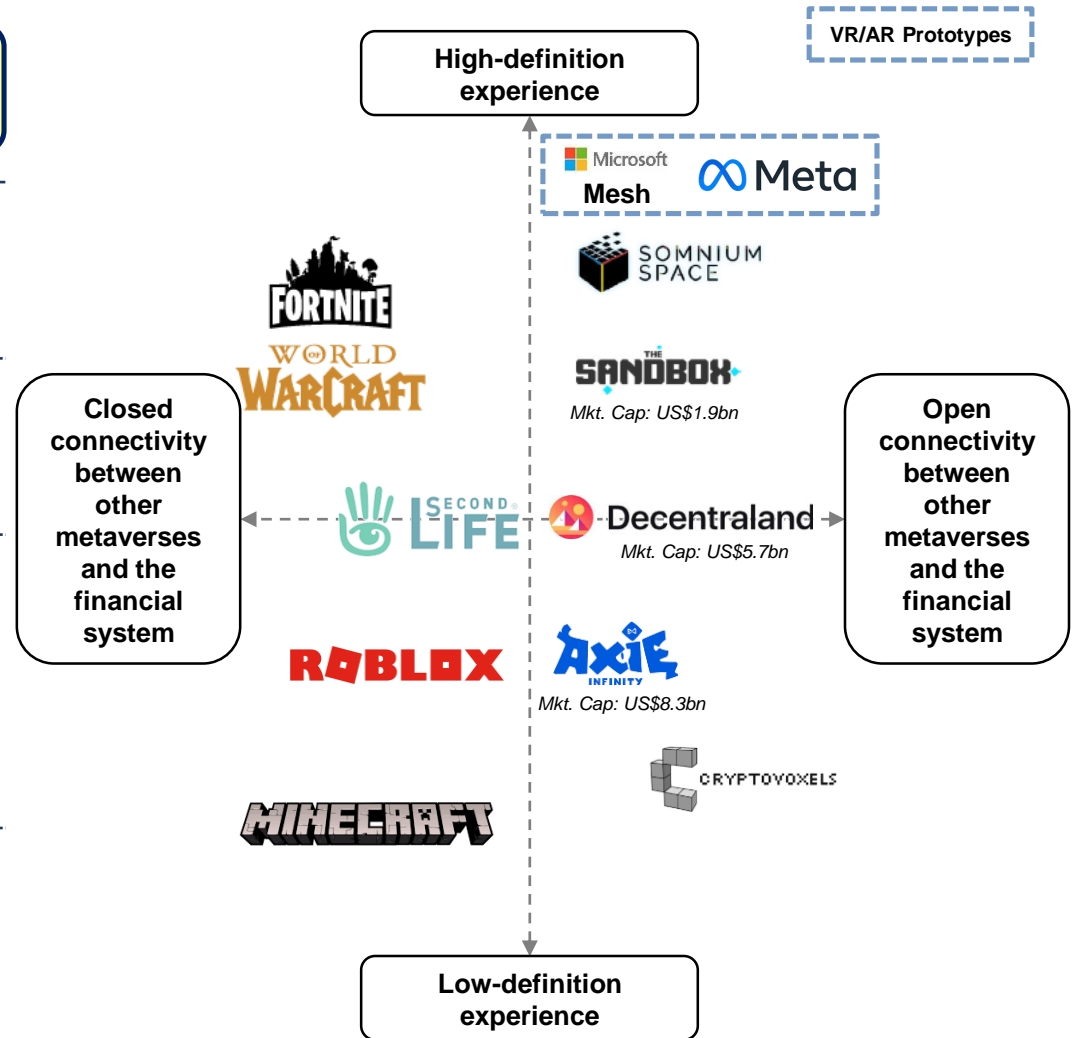

Source: Company Website, Company Presentation, Statista.com 2020, Statista, 2019

What is the Metaverse?

Metaverse – a virtual ecosystem where users can interact, experience, transact, and generate value together

- (M)** The concept of metaverse is not new. In fact, early open world games such as World of Warcraft are already closed metaverses where users can interact with each other
- (E)** A metaverse ecosystem is not only applicable to games – further human-based ecosystems can be built within them, where people can work and societies can create their own rules and financial systems
- (T)** The metaverse is currently propelled by two technological developments:
 - **Performance / Experience:** 5G and AR/VR developments help increase the quality of experience within metaverses
 - **Blockchain:** increasing financial connectivity allows tokens / currencies used within a metaverse to transfer value across ecosystems, and from the virtual to the physical world
- (A)** Further unlocking the metaverse is a huge milestone as the gradual reduction of differences between the virtual and physical worlds ramps up

The Current Metaverse Landscape

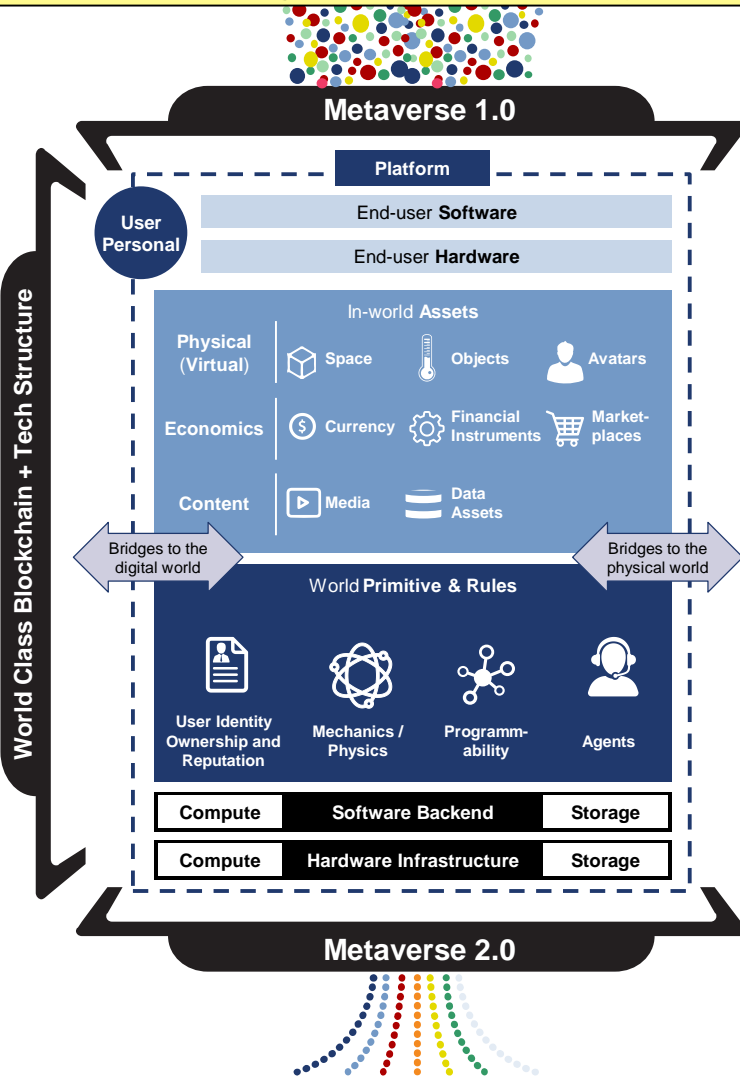

Source: CoinMarketCap as of 31-Oct-21

Development and Resurgence of the Metaverse

Blockchain has Brought Forward the Next-Generation Metaverse

- Blockchain and cryptocurrencies enable value within a Metaverse to be transferred out of the virtual world and into fiat currency
- This allows for the creation of a financial ecosystem, which is the main difference between Metaverse 2.0 and Metaverse 1.0
- Impact of building sophisticated financial systems within the Metaverse cannot be understated

	Metaverse 1.0	Metaverse 2.0
Connectivity	Closed	Open
Structure	Centralized	Decentralized
Financial Currency	In-Game Tokens	Cryptocurrencies, with the ability to convert to fiat
Transferability of Financial Currency / Value	Limited	Unlimited
Embedded Potential of Financial Ecosystem	Limited	Unlimited, with potential to turn into a sophisticated system similar to the physical world
Main Use Case	Gaming	Gaming, AR/VR Worlds, Broadcasting, Creation of User-Generated Content

Building Blocks of a Metaverse Financial System

Internet Money, e.g. Bitcoin	De-Fi, e.g. guilds, smart contracts, decentralized transactions
Sovereign Virtual Goods, e.g. NFTs	Digital to Physical Redemption, e.g. Bosc Protocol
Decentralized Governance	Self Sovereign Identity & Verifiable Claims
Self Custody – Wallet and Applications	

4 The Future of the Metaverse

Potential Trajectory

Beeple sold an NFT for \$69 million

Through a first-of-its-kind auction at Christie's

Old

Short Term

Medium Term

Long Term

- Closed, centralized metaverses such as Fortnite and Roblox saw huge popularity of their platforms as users leveraged extensive tools to create user-generation content
- Daily active users on Fortnite reached 6-12 million as of Sep-2021
- These metaverses are no longer just for gaming – Travis Scott, a modern hip-hop star, hosted a concert on Fortnite in Apr-2020 with 12.3mm people having watched according to TechCrunch, showing the potential of entertainment events in the metaverse

- Record shattering transactions on art-based NFTs, e.g. Beeple, drew significant attention to the NFT space
- Popular “play-to-earn” games such as Axie Infinity, with the backdrop of COVID-19 stay-at-home policies, continue to grow and develop a new gaming genre
- Development of virtual-to-physical redemption and financial systems, including guilds and De-Fi financial transactions
- Increasing familiarity with metaverse for users to interact and generate content

- Metaverses slowly become virtual societies, with further development of financial systems, rules, and conventions
- NFTs provide digital ownership of goods (e.g. art), properties, etc.
- As tools for user-generated content improve, metaverse ecosystems will increasingly become user-led, leveraging its decentralized characteristics

- Maturation of hardware, including but not limited to AR/VR technologies, narrows down the difference between virtual and physical worlds
- Improvement in blockchain technologies enables metaverses to exhibit a sophisticated financial system not dissimilar to the current system in the physical world

Fully Open & Decentralized

Fully Closed & Centralized

Traditional Social Media Evolution to Metaverse

FACEBOOK

Meta

- Enabled by the internet and mobile devices, traditional social media platforms changed the way we socialize and conduct business with each other
- The Metaverse will be the successor to the mobile internet, and will slowly emerge as different products, services, and capabilities integrate together
- Now re-branded as Meta, Facebook's investment in augmented and virtual reality technology including Oculus will help the company to further re-define the future of these social and economic interactions

Legacy Payment Processors Look Ahead to Metaverse

- Just as Visa and Mastercard successfully navigated their businesses from legacy cash- and check-based transactions to the mobile- and digital-based transactions of today, both companies are looking ahead to the Metaverse with investments in and partnerships with a variety of cryptocurrency and blockchain companies

“Enabling secure commerce is what we do [...] and that extends to new forms of digital commerce that unlock access. [...] We're thinking deeply about this space and how we can apply our expertise in enabling **seamless and secure digital payments** to make NFT-commerce **accessible and useable** for buyers and sellers.”

– Cuy Sheffield,
Head of Crypto, Visa

“Mixed reality will be **increasingly accessible to businesses and consumers**, transforming our lives over the next few years. We will move through these hybrid worlds with different experiences in different dimensions in a paradigm shift enabled by a **tsunami of tech changes** over the next decade.”

– Keith Jordan, VP of Innovation,
Mastercard's Labs as a Service

The Battle for In-Metaverse Transactions

Early Metaverse platforms are driving the growing number of alternative digital marketplaces and capturing significant value

- The ongoing legal developments between Epic Games (creator of Fortnite), Apple, and Google highlight the **potential value at stake** in the Metaverse
- In August 2020, Epic Games added an alternative payment option to Fortnite on iOS and Android to avoid the **30% cut of in-game purchases** that goes to Apple and Google. Both companies removed Fortnite from their platforms on the same day
 - Apple in particular has substantial market power due to its 55% control of transactions in mobile gaming
- Over the 30 months since Epic launched Fortnite on Apple's App Store in 2018, users spent almost **\$1.2 billion** on Fortnite, generating revenue of about **\$354 million** for Apple according to Sensor Tower estimates

- Many cryptocurrency-driven companies are already acting more like Amazon or Apple App Store-style marketplaces as they race to create the Metaverse
 - With a market cap of over US\$40bn, Roblox takes as much as **75% of revenue** from and pays its developers using its in-game currency, Robux
 - Epic's own Epic Games Store charges a **flat rate of 12%** for developers selling there
- In the anticipated Metaverse era, these cryptocurrency-driven platforms could provide not just the company's own products but entire ecosystems in which other businesses could sell their products as well

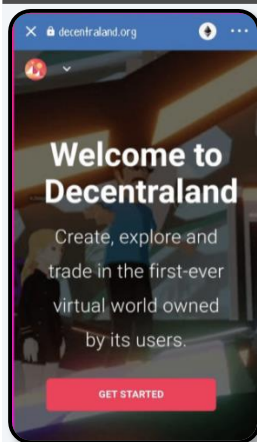

Physical Collectibles -> Digital Collectibles

“Funko will Combine Its Collectible Figures with NFTs”
(April 1, 2021)

- Funko plans to combine Pop vinyl figures with digital tokens using the Wax platform. Funko will offer an NFT each week starting at \$10, and will make the "rarest" tokens with exclusive Funko Pop figures
- Funko acquired a majority ownership stake in TokenWave, the developer of TokenHead
- TokenHead is available on iOS and Android, and currently displays over 10 million NFTs and has more than 100,000 visits per day

Metaverse and VR

- Decentraland is a decentralized VR platform that enables users to buy and trade land, play games, and interact with one another
- Decentraland is the biggest virtual world in the NFT space
- It's a unique blend of top games like Fortnite and Minecraft, where users can buy and trade parcels. These parcels are 16 x 16 portions of land with unique coordinates

Source: Company Websites

B20 Token and Tokenization of NFTs

- The ownership of The Bleeple 20 Collection has been fractionalized into the B20 tokens. The bundle itself is immutable, unless bought out entirely, by anyone with the requisite DAI and B20 tokens
- The B.20 bundle can be bought out by anyone, with a minimum bid of \$12 million, in which case all B.20 holders receive the proceeds, pro rata

Total Supply: **10 Million**
B.20s Sold: **3.8 Million**
Proceeds (in DAI): **1276364**
Keymasters as on launch: **557**

Royalties Generated by EulerBeats

EulerBeats Generate \$1.1 Million in Royalties in First Week

Ethereum-based music NFTs EulerBeats are already bringing their holders serious returns.

- Holders of Ethereum-based, non-fungible tokens (NFTs) EulerBeats earned roughly \$1.15 million in royalties in the first week after the project was launched
- Mark Cuban owns at least two EulerBeats and called them “the most genius idea ever”
- The project was created by blockchain startup Treum and backed by Ethereum development studio ConsenSys

Implications of Blockchain Technology on Market Structure

Implications for Market Structure

1 Clients

- Reduction of costs in capital markets dealing and securities servicing
- With guaranteed execution on open markets, retail and wholesale investors may transact more among themselves

2 Dealers

- Primary value will be in price setting, advising on transactions, and execution management, rather than in providing market access

3 Private Trading Companies

- A near real-time settlement process would have major implications for private trading companies, particularly market-makers and high-frequency traders
- Trading could move to pre-trade validation of ownership prior to the asset being sold

4 Venues

- The cryptographic signature data formed at the time of a transaction would serve as the data required for settlement, increasing the value of the role provided by venues

5 CCPs

- No longer a need to clear transactions centrally (as both sides have pre-trade transparency that their counterpart will be able to meet the terms of the transaction, and settlement happens almost instantly)
- However, transactions with a longer lifecycle (such as derivatives) still need the advantages of CCP innovation

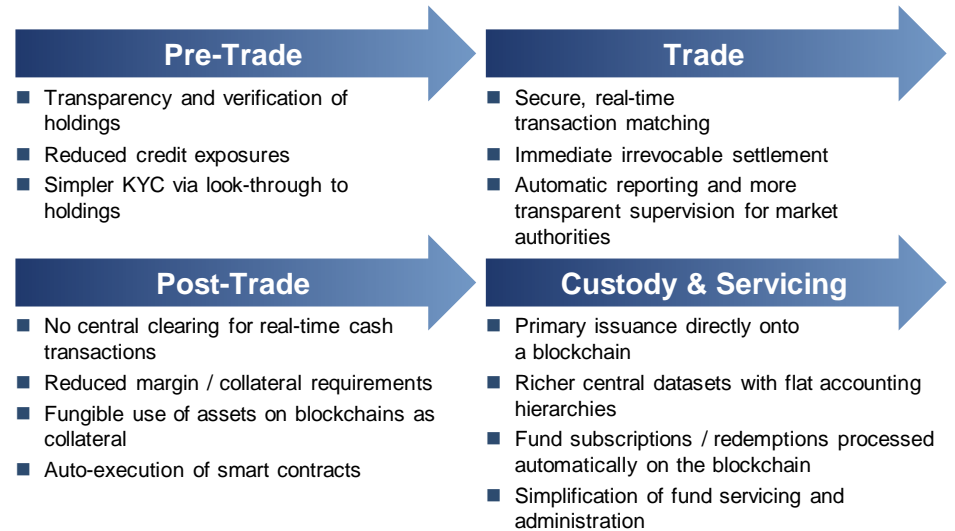

6 Custodians

- Distributed asset ledgers with flat accounting structures could remove some of the role that custodians play today

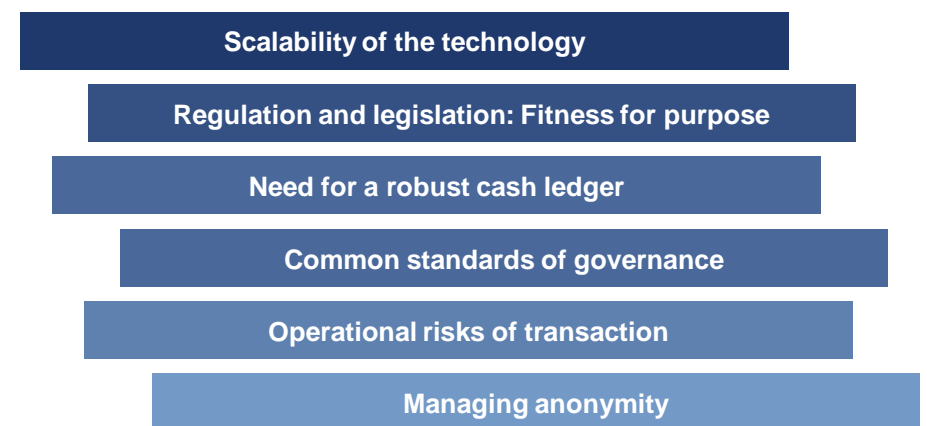

7 CSDs

- The need remains for coordinated oversight of asset issuances and ensuring orderly functioning of the market
- Traditional CSDs could play the role of operational governance: coordinating the evolution of ledger protocols, managing the introduction or cancellation of tokens on the ledger, regulator interface, etc.

Benefits of Adoption

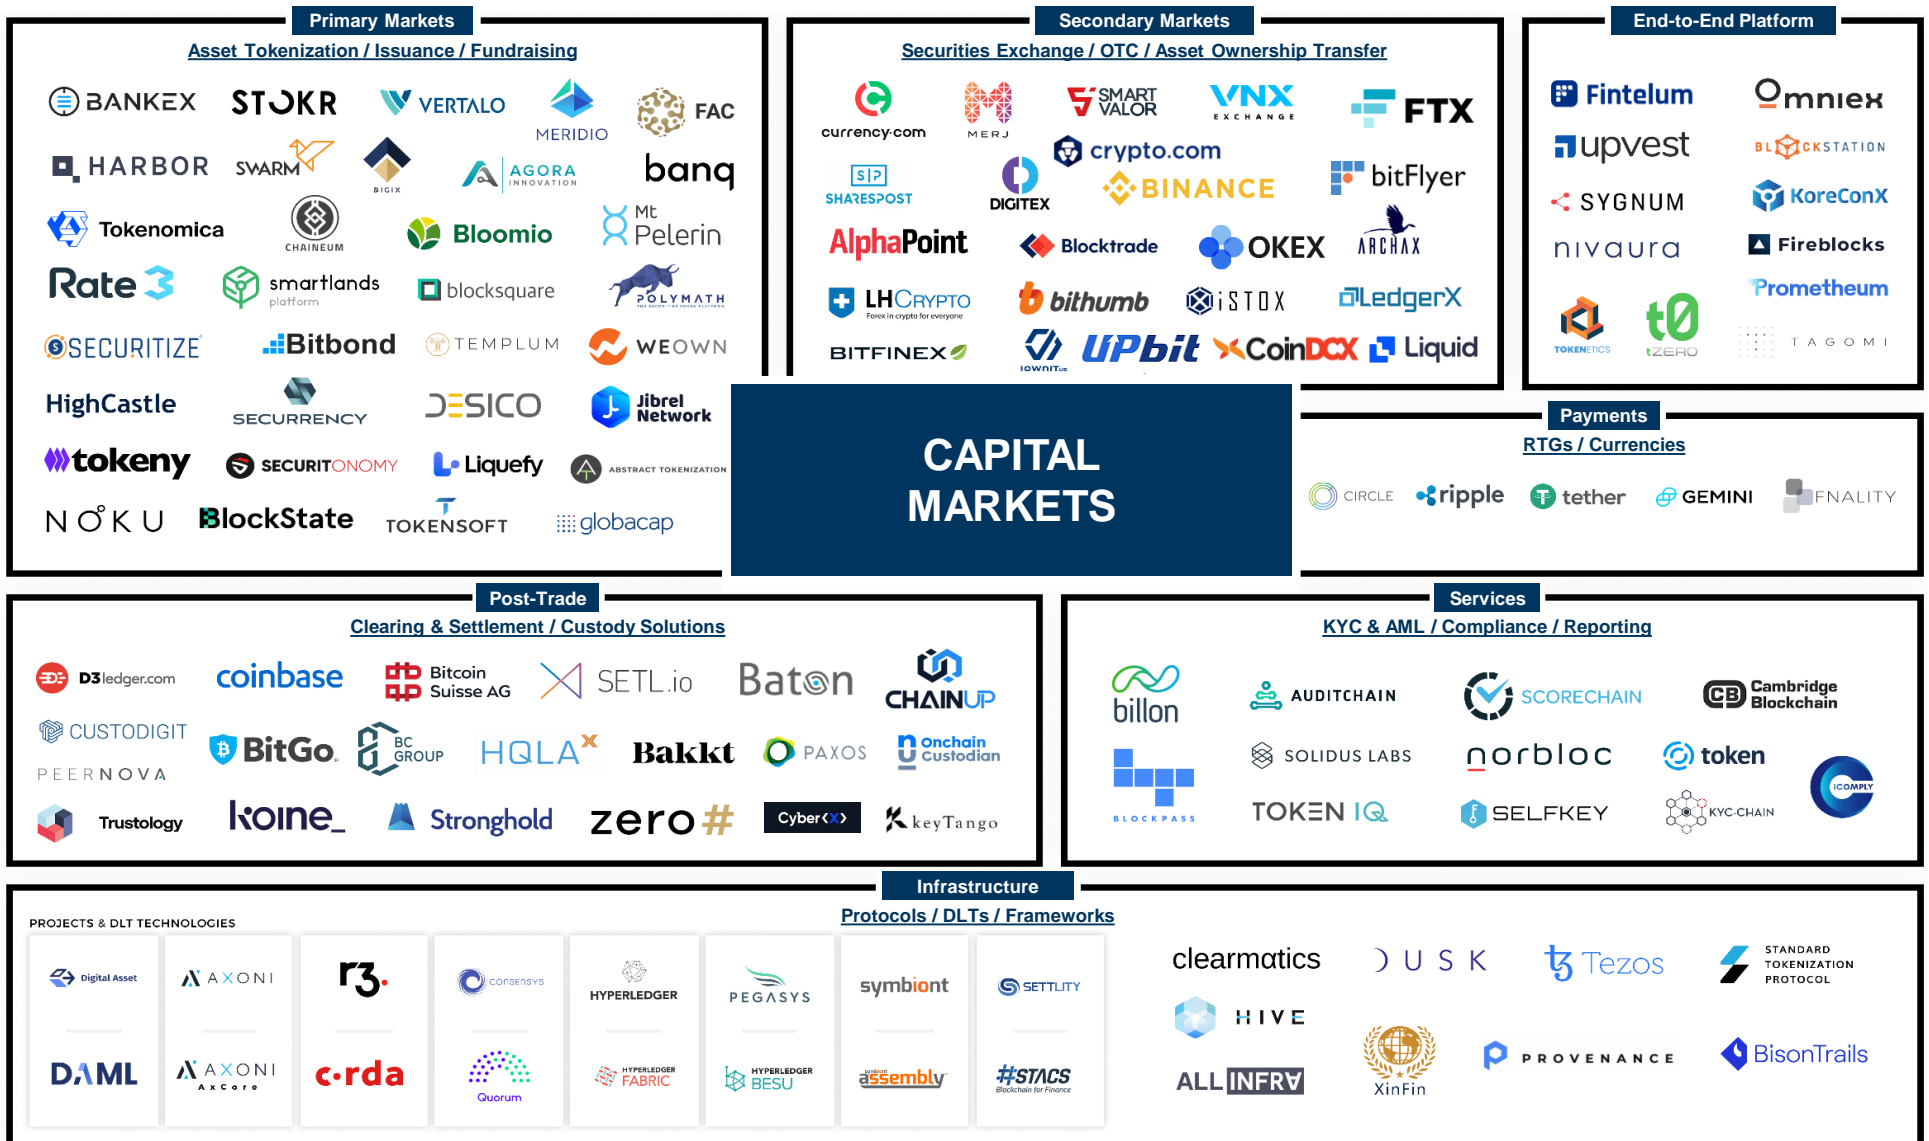

Hurdles to Adoption

II. How Digital Assets Transform the Financial Infrastructure Space

Blockchain Technology Solved 2 Key Problems

How to prevent making infinite copies of a digital assets (like the ability to save an email attachment any number of time)? – **Double Spend Problem**

How to facilitate value exchange between multiple parties without requiring a trusted third party? – **Distributed Trust**

Double spend problem is solved by using cryptography, and recording each transaction and coin ownership in a **public distributed ledger** shared by each participant on the network

Problem of Distributed Trust is solved by a **consensus mechanism** known as *proof-of-work* which ensures all transactions made on the network are agreed upon by the majority of participating parties

Network participants are **incentivized to verify transactions** because of the promise of a potential economic reward (i.e. mined bitcoin)

Blockchain Solution

Challenges

Anonymous **participants who don't know or trust each other** on the network

Communication channel for information and **value exchange is not secure**

There is **no trusted third party** / intermediary acting as a clearing agent

Impact of Digital Currencies on Traditional Finance

Digital currency ethos believes in a more transparent and inclusive financial services industry

Themes

- ✓ Real time payments
- ✓ Open network
- ✓ Smart contracts
- ✓ Decentralized

What May Hold the Industry Back

- Lack of clear regulation
- Volatility
- Security and fraud fear

Traditional Financial Institutions are Beginning to Focus on Digital Assets and Crypto

Financial services companies are prioritizing their crypto strategies

*“And I would say that **this [crypto] is a space that we are leaning into in a very, very big way and I think are extremely well positioned**...So converting a digital currency to a fiat on a Visa credential, which then makes those funds available for shopping at any 1 of the 70 million Visa merchants and gives immediate utility to the digital currency. And we're the clear leader here. **We've got over 35 digital currency platforms and wallets that have chosen to work with us.** Coinbase, Crypto.com, BlockFi, Fold, Bitpanda are just some examples”*

Alfred Francis Kelly, Chairman & CEO
April 27, 2021

*“The **exponential pace of asset digitalisation** provides immense opportunities to **reshape capital markets**. For Singapore to become even more competitive as a global financial hub, we have to prepare ourselves to **welcome the mainstream adoption of digital assets and currency trading**. DBS is committed to accelerating the **development of a fully integrated ecosystem** to facilitate this. We believe that this is the first of its kind integrated offering, which is differentiated in many ways.”*

Piyush Gupta, Group CEO
December 10, 2020

*“We recently also announced the establishment of a **new digital assets unit, which is building a multi-asset platform that will allow us to custody traditional as well as digital assets, including cryptocurrencies in a new and creative way**. The growing client demand for digital assets and improved regulatory clarity presents an opportunity for us to extend our current service offerings over time through this emerging field.”*

Thomas P. Gibbons, CEO & Director
April 16, 2021

*“We believe **digital assets are an important part of the future landscape of financial services** and we are pleased to be a part of its evolution as we seek to serve the growing needs of our clients. NYDIG is at the forefront of the industry from a regulatory and security perspective which makes them the perfect partner as **we seek to help bring Bitcoin solutions into the mainstream**. Today's announcement marks an important step towards establishing ourselves as one of the first Bitcoin-friendly regional banks in the country.”*

Scott F. Kavanaugh, CEO
April 20, 2021

2 The Opportunity in Brokerage

NYDIG's Growing Crypto Partnership Network

NYDIG has announced several deals geared toward enabling traditional financial institutions to access cryptocurrency

Easy Access to Bitcoin via Fiserv and NYDIG

- Partnership will allow consumers to manage bitcoin transactions directly within their financial institution's online and mobile banking portals
 - Provides users an easy way to buy, sell and hold the popular digital asset through their trusted financial institutions
 - Enables banks to meet growing mainstream interest in bitcoin, retain and grow their customer base, and increase non-interest income opportunities
 - California-based First Foundation Bank is already working with Fiserv and NYDIG to bring these capabilities to market
- Fiserv and NYDIG are also working toward implementing additional functionality, including the ability for banks to implement bitcoin-based rewards programs

Deal with NCR Enables More Banks to Offer Bitcoin

- Enterprise payments company NCR struck a deal with NYDIG that will enable 650 U.S. banks and credit unions to offer bitcoin purchases to millions of customers
 - Partnership will provide estimated 24mm customers the ability to trade the cryptocurrency on mobile applications developed by their payments providers
 - Financial institutions include First Citizens Bank, (over \$50 billion in assets), and Bay Federal Credit Union (over \$1.4 billion in assets)
- Financial institutions will be able to use NYDIG's custody services to offer customers the ability to access Bitcoin
- In addition to custody services, NYDIG will charge cryptocurrency transaction fees and provide additional investment services

Source: Public filings.

3 Digital Assets Deposit Growth

(\$ in millions)

- Crypto firms continue to be a low-cost source of deposits for the few banks that serve the industry
- Signature Bank’s digital currency deposits now total over \$10bn, or approximately 15% of total deposits
 - Signature added \$4.4bn in new deposits from digital currency customers in Q1 2021
 - SBNY’s total cost of deposits in Q1 2021 was 0.33%

Silvergate Digital Currency Deposit Trend

4 The Opportunity in Lending (1/2)

CeFi AUM has Experienced an Explosive Growth Trajectory

- Centralized finance, or “CeFi,” allows individuals to earn interest or borrow funds through a centralized corporation using cryptocurrencies as collateral
- Corporations act as lenders and bear custody of their clients’ funds/assets while they put them to use to provide interest for the lenders
- Unlike in DeFi lending protocols, lenders transfer risks to these corporations

Top CeFi AUM

Total CeFi USD Assets Under Management (in USD bn)²

4 The Opportunity in Lending (2/2)

DeFi Lending Protocols have Accelerated Despite Complex User Experience

- DeFi broadly refers to smart contracts and protocols that provide decentralized access to traditional instruments like lending and yield products
- DeFi protocols are a category of decentralized applications built on top of smart contract-enriched blockchains – primarily the Ethereum network
- These protocols inherently democratize and open access to a credit and rates markets for retail and institutional entities worldwide, often with little barrier to entry or arbitrary regulations

6 The Opportunity in Payments

Accelerating Use Cases

Bitcoin and other cryptocurrencies are becoming an increasingly popular payment option among many companies

- Accept payments with legacy rails that settle in digital currency
- Let international customers pay with their preferred payment method from traditional rails like cards and bank transfers, to blockchain rails that span the internet in one unified API
- All transactions settle in USDC directly into your Circle Account — where you can convert to a connected bank account or leverage the power of on-chain digital dollars
- Built in tooling for fraud management and operations

Traditional Payments

USD Coin (USDC)

Circle Account

- Banks join RippleNet to process cross-border payments in real-time with end-to-end tracking and certainty
- Available in 55+ countries across six continents, RippleNet makes it easy to connect and transact across a robust network of financial institutions
- With RippleNet, financial institutions can expand payment offerings into new markets that are otherwise difficult or expensive to reach

New Revenue

Meet customer demands for global reach with ease

Lower Costs

Reduce total cross-border transaction costs with fewer liquidity requirements

Consistent Experience

Rely on RippleNet's Rulebook for rules, standards and governance

One Integration Point

Plug in once to transact with any other RippleNet member

- Go live in minutes, not days
- No fees to accept crypto

First Public Digital Issuance on Ethereum Public Blockchain

European Investment Bank €100 Million 2-Year Digital Bond

Goldman Sachs Served as Joint-Lead Manager and Joint Structuring Advisor | 28-Apr-2021

Transaction Terms

Pricing Date:	27-Apr-2021
Settlement Date:	28-Apr-2021 (T+1)
Maturity Date:	28-Apr-2023
Issue Size:	€100 mm
Coupon:	0%, annual (ACT / ACT ICMA)
Re-offer Yield / Price:	(0.601)% / 101.213%
Governing Law:	French Law
Joint-Lead Managers:	Goldman Sachs International, Société Générale, Santander
Listing / ISIN	None / FR0014003521

Transaction Highlights

- ✓ First public digital issuance on Ethereum public blockchain
- ✓ First ever multi-dealer digital issuance
- ✓ Digitally native tokenization for both securities and cash (CBDC)
- ✓ T+1 settlement
- ✓ Third party investor participation

Transaction Overview

- On 28-Apr-2021, the European Investment Bank (EIB), rated Aaa / AAA / AA successfully issued and settled its first ever digital bond, using blockchain technology
- The €100 mm 2-year bond, placed with key market investors, represents the market's first multi-dealer led, primary issuance of digitally native tokens using blockchain technology
- The project was also selected by Banque de France (BdF) as part of their central bank digital currency (CBDC) experiment. The transaction therefore settled on-chain vis-à-vis the issuer in delivery vs payment using a CBDC provided by BdF
- The bond was issued under French law, for two main reasons: 1) the partnership with BdF and the CBDC component and 2) France was one of the first countries to authorize the registration and transfer of unlisted securities using blockchain technology (DLT Ordinance of 2017)
- The notes are issued in fully registered form, and the Ethereum public blockchain will act as the registry to record ownership and transactions

First Public Digital Issuance on Ethereum Public Blockchain
European Investment Bank €100 Million 2-Year Digital Bond
Goldman Sachs Served as Joint-Lead Manager and Joint Structuring Advisor | 28-Apr-2021

Transaction Highlights

- ✓ First public digital issuance on Ethereum public blockchain
- ✓ First ever multi-dealer digital issuance

Linklogis' US\$1.03bn Initial Public Offering on HKSE
Goldman Sachs Served as Joint Sponsor, Joint Global Coordinator, Joint Bookrunner, Joint Lead Manager and Stabilizing Manager
Priced on March 31, 2021 (HKT)

Transaction Highlights

- ✓ The 1st supply chain finance technology solutions provider listed on HKEx, largest ever SaaS IPO in APAC, and second largest primary HK listing in 2021YTD
- ✓ High quality cornerstone investors including global top-tier long-only (BlackRock, Fidelity International, Janus Henderson), sovereign wealth fund (Ontario Teachers' Pension Plan), top-tier China fund (Sequoia) and strategic investors (EDB Investment)
- ✓ Successfully priced at mid-to-high end amidst volatile market conditions with book significantly oversubscribed across the range and strong participation from top quality investors

Investment Highlights

- **Pioneer and leader in the thriving supply chain finance technology industry**
 - Linklogis is the largest technology solution provider for supply chain finance in China; it processed RMB164 billion supply chain finance transactions in 2020, accounting for 20.6% market share
 - Linklogis is also at the forefront of innovation in supply chain finance and payment, and is committed to transforming the industry with cutting-edge technologies and solutions
- **Purpose-built, end-to-end technology solutions**
 - Linklogis provides software and systems that digitalize the workflow of supply chain financing and optimize the payment cycle of supply chain transactions
 - Linklogis has served and partnered with over 340 anchor enterprises and ~200 financial institutions as of year-end 2020

The Introduction of CBDCs Could Have Broad Implications for the Banking & Payments System

Central Banks around the world are exploring the possibility of introducing central bank digital currency (CBDC), with potential to improve the payments system seen as one of the most compelling rationales for implementation

Use cases for CBDC have the potential to meaningfully reduce friction in the implementation of central bank fiscal and monetary policy

Fiscal Policy: Facilitate instant delivery of stimulus payments, while a more radical structure could permit policymakers to program platform to set tax rates that vary over time or even across geographies in response to economic data

Monetary Policy: Wide use would provide better real-time information about economic activity, while interest-bearing CBDC could achieve complete and immediate transmission of monetary policy to depositors, varying interest rates in real-time in response to economic conditions

Potential Benefits of a CBDC

Faster & Cheaper Payments

Reduce Costs and Crime Associated with Cash

Broaden Financial Inclusion Through Electronic Payments

Programmability and Financial Innovation

Potential Risks from Implementation

Security Challenges / Risks of Fraud or Error

Payment Network Disintermediation – Broader Access to Interbank Rails

Bank Disintermediation – Displacement of Core Funding

CBDC could challenge card payment networks by undermining three key advantages over competitors:

Network Effect: Broad adoption of CBDC could undermine wide use and acceptance of cards by offering wider range of payment providers access to central bank clearing

Barriers to Entry: Central bank or consortium of clearing operators could bare start-up costs of platform-wide services such as security and fraud detection so that new payment providers do not have to

Brand Advantage: New competitors could challenge brand popularity by attempting to lure consumers and merchants with more attractive terms and rewards

Strength of incumbency varies by market – likely that CBDC and interbank payment methods that bypass card networks take hold more quickly in markets with lower initial advantage

Corporate Governance

- What justification is needed to make an allocation?
- How will an allocation impact board/investment committee authorizations?
- What internal prep – controls or technology – is required?
- What risk management frameworks and procedures are needed?
- Is a BTC trading policy required for employees?
- What components should be amended in a treasury reserve policy?
- What is the strategy for hedging BTC exposure?

Investor Relations

- What is the investor communication strategy?
- How will this impact broader external (and internal) business narratives?
- What do public shareholders think of companies that allocate crypto?
- How should we handle quarterly disclosure and other MD&A topics?

Tax, Accounting, and Regulatory

- How will this investment impact corporate tax obligations?
- How do transaction costs impact tax obligations?
- What is the impact to accounting policies (e.g. impairment testing)?
- How will this impact financial statements?
- What state and federal laws are applicable for crypto ownership?
- Is BTC considered a security?
- How do regulators think about BTC and corporations that allocate to it?
- How does this impact any international regulatory obligations?

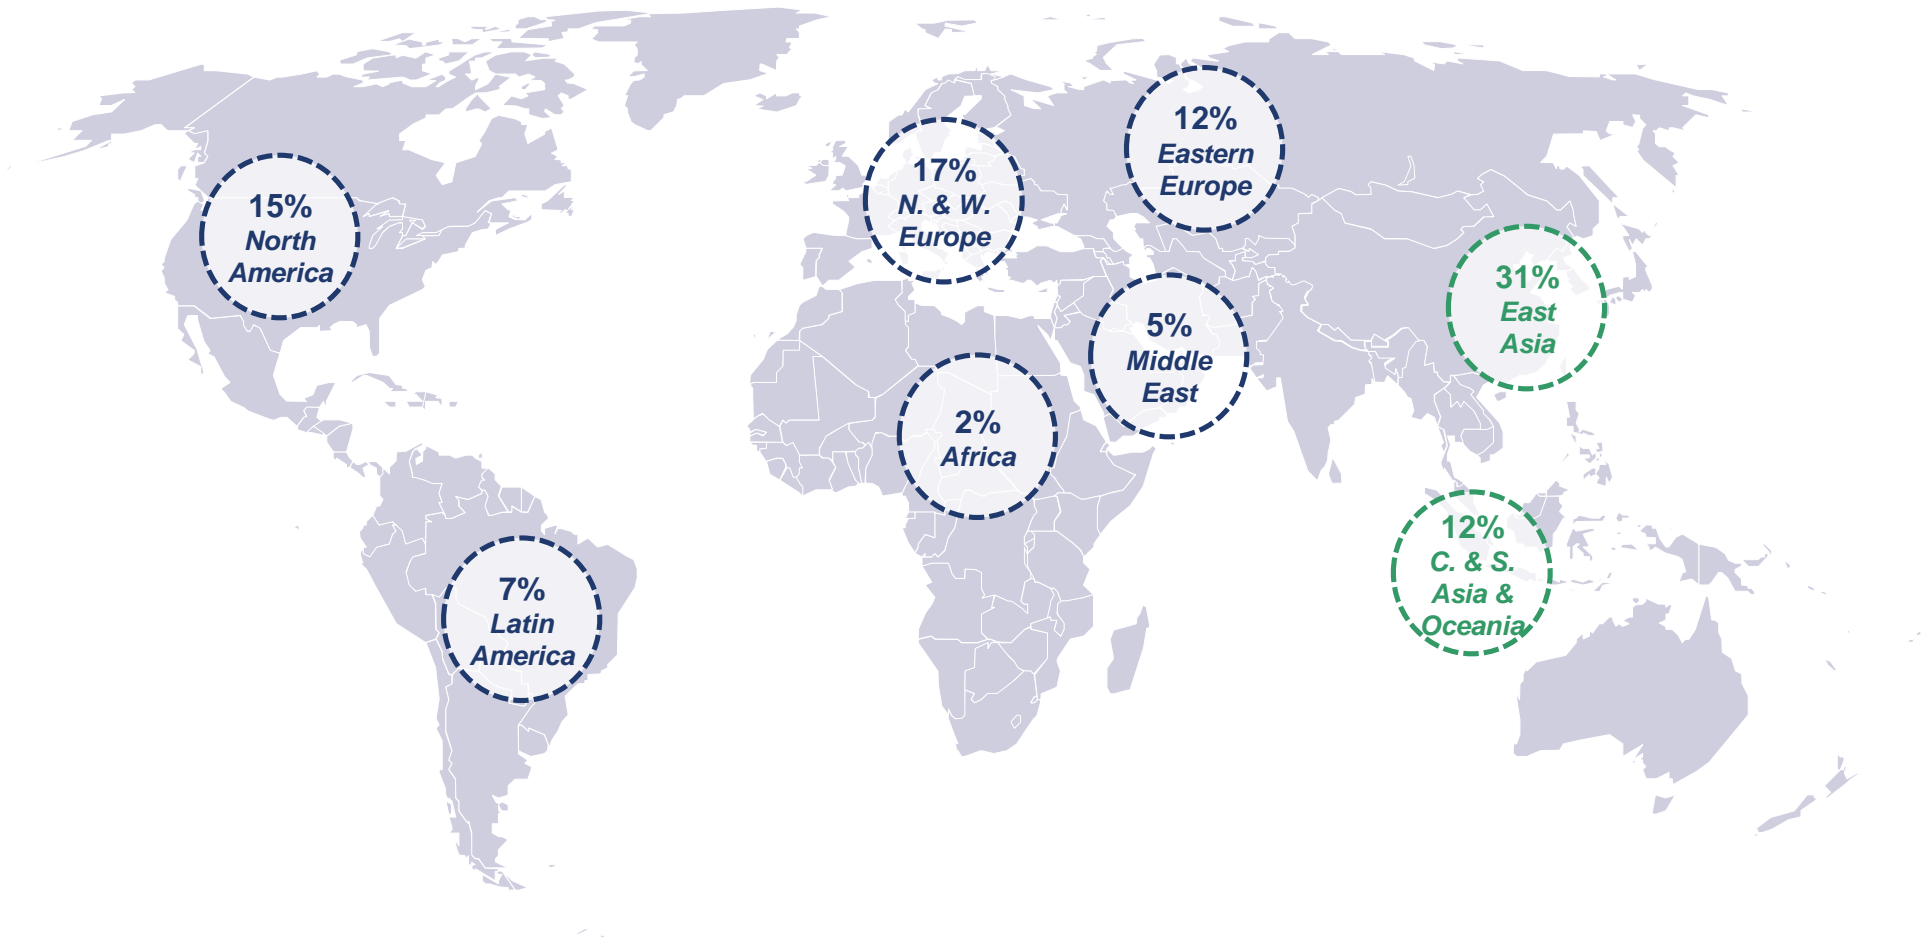

Digital Asset Service Providers

- What security measures does the provider have?
- What is the regulatory profile of the crypto provider? What licensing or auditing requirements are they subject to?
- What kind of insurance is offered? What are the coverage terms?
- Trading – 24x7 coverage, secrecy, and liquidity depth?
- Trusted counterparty, controls, and instant liquidity?

III. Finding the Opportunities in the Asian Digital Assets Space

Asia is the Leader in Digital Asset Adoption Globally

Asia is the leading region globally by share of all cryptocurrency value sent and received

Source: Chainalysis

Asia Digital Assets, Blockchain and Cryptocurrency Regulation

The complex and evolutionary nature of crypto has led to differing interpretations and treatment from various regulators globally

Singapore

- Many see Singapore as a crypto-friendly regulatory environment with strong government support
- Set to grant licenses to “several” digital payments service providers in August 2021, cementing its status as Asia’s leading crypto-financial hub
- Some groups in Singapore, including Binance, have already been given an exemption to provide services to retail and institutional investors while they await a formal license

Hong Kong

- Hong Kong has adopted a stricter stance on digital assets, and has previously said it would forbid licensed platforms from servicing retail investors and was enhancing its anti-money-laundering and counterterrorism financing regulations
- Hong Kong's Securities and Futures Commission has largely dealt with the issues by limiting access to crypto-based funds to professional investors

Japan

- Permissive toward crypto assets overall
- Strong crypto regulations on crypto platforms and ICOs, caused by high profile exchange hacks (e.g. Mt Gox hack)

South Korea

- In March 2021, South Korea passed new legislation to strengthen the supervision of virtual assets: under the new legislation, all virtual asset management providers (including cryptocurrency exchanges and other virtual asset service providers) must register with the Korea Financial Intelligence Unit (KFIU)
- Reluctance of banks to partner with cryptocurrency exchanges due to negative regulatory comments on virtual assets and the risk of financial crimes

India

- Policymakers continue to debate the status of digital currencies in India; the central bank has said it has “major concerns” about private virtual currencies
- The government was recently rumored to potentially ban cryptocurrencies altogether
- A ban from the Reserve Bank of India on the use of cryptocurrency in the banking sector was lifted in March 2020; however, the court ordered the government to take a position and draft a law on the matter
- The Reserve Bank of India is looking to create its own digital currency

China

- Supportive of blockchain applications in the industry
- Central bank plans to issue digital currency, partly leveraging blockchain technology
- Cryptocurrency exchanges and ICOs are banned

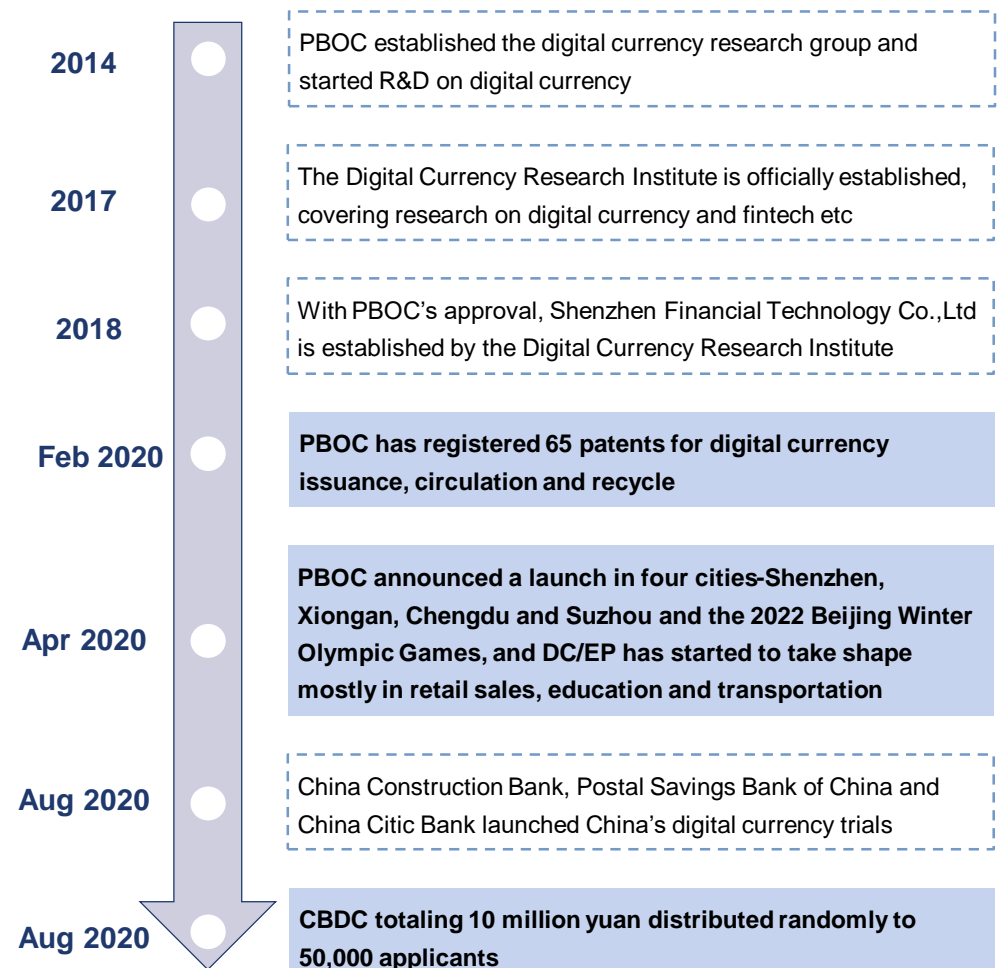

As different central banks globally make progress on rolling out their CBDCs, China has moved to the frontier of sovereign digital currency development in 2020

Overview of CBDC

- A central bank digital currency (CBDC) is “a new form of money, issued digitally by the central bank and intended to serve as legal tender”
- There are two major forms of CBDCs
 - Wholesale CBDCs are used between the central bank and financial institutions only
 - Retail CBDCs are “digital cash” (M0) for general use by households and businesses
- China’s CBDC is known as DC/EP, digital currency and electronic payment, with the primary goal of supplementing or replacing traditional physical cash
- The multi-layered cash circulation system involves substantial cost of issuance, printing, return and storage of banknotes and coins and carries the risk of money laundering and other illegal activities. As digitalized fiat money, DC/EP is an alternative liability of the central bank with potentially greater convenience and lower cost.
- According to remarks in April from PBOC Governor Yi, the PBOC’s CBDC aims to satisfy people’s demand for legal tender in retail payment, improve payment convenience, security and anti-counterfeiting, and further accelerate the development of the digital economy
- A particularly important motivation for PBOC appears to be the desire to maintain or expand monetary sovereignty in the face of both domestic and external innovation

Development of China CBDC

Asia is the Leader in Digital Exchanges with More on the Horizon

ADDX (ICHX Tech)

- Singapore-based private platform operated by local co. ICHX Tech
- Shareholders including Singapore Exchange (SGX) and state investor Temasek Holdings
- In January 2021, raised \$50 million to increase its overseas presence to draw more issuers and investors
- Aims to have 20 listings on the platform (up from 7) by the end of 2021

DBS Digital Exchange

- Singapore's largest bank, DBS Group Holdings, is launching a platform called DBS Digital Exchange
- Issuance and trading of digital tokens backed by shares in unlisted companies, bonds and private equity funds

"The exponential pace of asset digitalization provides immense opportunities to reshape capital markets"

SIX Group, SBI Holdings

- Another local private exchange is planned by Swiss bourse group SIX and Japanese brokerage SBI Holdings
- Jointly plan to launch Singapore-based joint exchange venture by 2022
- Drive institutional digital asset liquidity

Stock Exchange of Thailand

- The Stock Exchange of Thailand announced in January 2021 that it would launch a platform for digital asset trading

"Widen business opportunities and revenue streams to the capital market's operators while offering new investment alternatives to investors"

Osaka Digital Exchange

- Japan's Sumitomo Mitsui Financial Group and SBI Holdings also jointly announced in January 2021 a plan to launch the Osaka Digital Exchange in 2022
- They say the exchange will be the first private exchange in Japan to handle digital securities
- The Japanese government in 2020 amended its Financial Instruments and Exchange Act to include rules for security tokens

Zipmex

- The exchange is regulated in Singapore, Australia and Indonesia, and licensed in Thailand
- Focuses on investors new to cryptocurrency by offering educational features, as well as high-net-worth individuals
- Competes against other regional exchanges such as BitKub in Thailand and Swyftx in Australia
- Larger players such as Coinbase and Binance are also targeting growth in the Asia Pacific region

Appendix A: Selected Case Studies

Bullish's \$9 Billion De-SPAC Expected to close by the end of 2021

Bullish Overview

- Bullish, a unit of blockchain software company Block.one, is a technology company focused on developing financial services for digital assets sector
- It will publicly launch its regulated crypto exchange later this year, which is designed to benefit the asset holders, empower traders, and increase the overall market integrity
- It is backed by billionaire entrepreneur Peter Thiel's Thiel Capital and Founders Fund, British hedge fund manager Alan Howard, U.S. hedge fund manager Louis Bacon, Hong Kong billionaire Richard Li, German investor Christian Angermayer's Apeiron Investment Group, Galaxy Digital, and Japanese bank Nomura
- Block.one is an asset holding and investment company that creates, incubates, and invests in businesses that build trust in transactions, transparency in systems and efficiency. Block.one has funded more than 100 innovative entrepreneurs to date

Pro Forma Ownership

US\$6.5bn of Balance Sheet Assets

Transaction Overview

- On July 9, 2021, Bullish announced its intention to go public on the NYSE through a merger with Far Peak Acquisition Corporation (NYSE: FPAC), a SPAC company
- The combined Bullish and Far Peak entity is poised to have a pro forma equity value at signing of approximately \$9 billion, to be adjusted at the closing of the transaction based on crypto asset prices around that time
- This transaction is subject to approval by Far Peak stockholders and other customary closing conditions, including regulatory approvals. The Boards of Directors of both Bullish and Far Peak have unanimously approved the proposed transaction
- Upon completion of the transaction, Far Peak CEO Thomas W. Farley will become the CEO of Bullish and Block.one CEO Brendan Blumer will be appointed Chairman of Bullish

Commentary

“Bullish represents a promising future for financial services. With the increased interest from institutional players and sophisticated traders, it is critical to iterate on the existing exchange infrastructures we see today. Bullish is well positioned to strategically deliver value to its prospective shareholders as it capitalizes on market trends and places technological innovation at the core of its identity. We’re only in the first or second inning of the cryptocurrency market and I’m thrilled to be joining the Bullish team as we revolutionize the future of digital assets through cutting edge financial technologies.”

— Thomas W. Farley, Chairman and CEO of Far Peak

Pro Forma Ownership

Circle Overview

- Circle Internet Financial ("Circle") has entered into a definitive business combination agreement with Concord Acquisition Corp (NYSE: CND) ("Concord"), a special purpose acquisition company ("SPAC")
- Implied Circle enterprise value of \$4.5bn and EV / 2023 revenue multiple of 5.8x
- The transaction includes \$276 mm in gross proceeds from Concord's cash in trust¹ and \$415 mm in gross proceeds from fully committed strategic and institutional investors, including Marshall Wace LLP, Fidelity Management & Research Company LLC, Adage Capital Management LP, accounts advised by ARK Investment Management LLC and Third Point
- The business combination is targeted to close in the fourth quarter of 2021, subject to stockholder approvals and other customary closing conditions
- Concord, led by Chairman Bob Diamond and CEO Jeff Tuder, is a SPAC formed to merge with a business in the financial services or financial technology industries

Commentary

"Circle's evolution as a company, driven by our team's unrelenting focus on building the safest, well-regulated blockchain-based financial solutions, continues to power a revolution in digital commerce on the Internet. USDC's wide adoption as the standard for trusted digital currencies positions us at the center of growing market and institutional needs that are aligned with our vision and mission of raising global economic prosperity through the frictionless exchange of financial value."

— *Jeremy Allaire, Co-Founder and Chief Executive Officer of Circle*

"Circle is the true pioneer of trusted digital currencies and blockchain-based financial services designed and built inside the regulatory perimeter. The company's market positioning and innovative range of services covering payments, treasury and transaction services and financial yield, among others, are powering wide adoption of Internet-level financial services, without sacrificing trust, transparency and compliance."

— *Bob Diamond, Chairman of Concord*

Coinbase's \$1.25 Billion Convertible Debt Offering Goldman Sachs Served as Lead Left Bookrunner | Priced on 18-May-2021

Offering Highlights & Key Takeaways

1

Debut Public Financing: Coinbase achieved a 0.50% coupon and 55% conversion premium in its first public financing transaction, representing the fastest turnaround for a convertible offering ever after going public via direct listing just over a month ago in the April 14, 2021 direct listing

2

Opportunistic Financing: Coinbase took advantage of a historic convertible market to raise new debt. Given the company also purchased a capped call, the effective conversion price is 100% above yesterday's closing stock price and 91% above the direct listing reference price of \$250

3

Use of Proceeds: Coinbase was able to bolster their balance sheet to invest against the significant growth opportunities they see with 0.50% coupon debt

Key Pricing Details

Deal Size:	\$1.25 billion
Maturity:	5 Years
Coupon:	0.50%
Conversion Premium:	55.0%
Effective Conversion Premium:	100.0%

Coinbase Overview

- Coinbase's mission is to create an open financial system for the world; to create more economic freedom for every person and business
- Coinbase is building the cryptoeconomy – a more fair, accessible, efficient and transparent financial system for the internet age that leverages crypto assets
- Coinbase's early focus on trust and usability has allowed the Company to become the primary on-ramp to the cryptoeconomy from the fiat-based financial system
- Coinbase directly integrates with over 15 blockchain protocols, supports over 108 crypto assets for trading or custody and offers a suite of subscription products and services
